

What if you could generate a comprehensive and monitored requirements list 24/7, in minutes, at low cost?

That is the core of ProductIP. If you have such a list you are able to:

- get better quotes from suppliers
 - review compliance evidence from suppliers
 - monitor changes in regulations
 - generate correct declarations
- and more.

Relevant aspects for generating the list are:

- countries you, or your customer, is going to sell the product
 - the date the products are entering the European market
- and last but not least
- the product

Our scope is non-food consumer goods. A pyjama, a powerbank, a coffee maker. Thousands of articles. The selection of the article will trigger a related set of questions. The combination of all the answers is used to generate the requirement list. This list is the core of the technical file and the basis for supply chain collaboration. Now you can connect suppliers via an invite and ask them to upload compliance evidence in the context of the requirement list.

So how to select the right product category, and what if you can't find it, or what if you think you have made the wrong choice?
