

# Proud Partner of Skeleton World Champion Kimberley Bos

**Serious About Product Compliance.**

## Construction Products Regulation CPR 2024/3110

# From CPR 305/2011 to CPR 2024/3110

- > Regulation, already applicable in all EU Member States
- > Get in Sync with new reality:
  - Digitalisation
  - Circular Economy
  - New Supply Chain roles (fulfilment service providers, online sellers)

# Urban Mining

- > Many Deadlines are pushed to 2030 even 2040
- > Construction Products Last Decades
- > What we build today becomes tomorrow's recycling material
- > But don't your "worry" the first impact is already now

# #PAWS - Let us look at changes using four lenses

- > **P**roduct
- > **A**rtwork (Information)
- > **W**orkflow (Process)
- > **S**upply Chain

# Rate the maturity

The maturity of our organisation with respect to Product Compliance is

LOW

HIGH

# Where will the pressure for product compliance come from?

# Countdown 10 - 1

## #10. Economic Operators

- **Process** - Fulfilment Providers and Online Sellers in the scope
- **Artwork** - Must show the correct roles

## #9. Harmonised Zone

- **Process** - fewer parallel approvals (CE only)
- **Artwork** - CE stands alone.

*National marks are not permitted in place of the CE mark for these harmonised products, as this would create market fragmentation.*

*However, some voluntary, but well-recognised, national quality marks can exist alongside the CE mark, as long as they don't hinder the free movement of products and are not used to claim conformity with the CPR.*

## #8. One Declaration- DoC + DoP combined (DoCp)

- **Process** - Some datapoints calculated via EU software. Scope CE+
- **Artwork** - Digital Availability. QR. DPP. New CPR specific Fields

# #7. Digital Product Passport

## #7. Digital Product Passport

- **Process** - Create and Maintain for 10 years
- **Artwork** - QR or NFC data carried tied to CE. DPP Including SVHC's!

## #7. Digital Product Passport

- **Process** - Create and Maintain for 10 years
- **Artwork** - QR or NFC data carried tied to CE. DPP Including SVHC's!

*Note that this is not just construction. It already has been decided: by 2027, the general move to QR-codes on products will be in place — whatever the product. CPR is simply part of that bigger shift.*

“All companies say they have a system.  
But the law doesn’t ask for a system, it asks for a process.  
Almost the same ... not entirely.  
So where are you today?”

# What do you have? A "system" or a proper process?

# Is your current way of working "future proof"

# Urban Mining

## #6. User / Reused products (Urban Mining)

- **Product - Re-used/Re-manufactured** now explicit in scope
- **Process** - Lifecycle starts at **de-installation**
- **Artwork** - CE + **de-installation date**

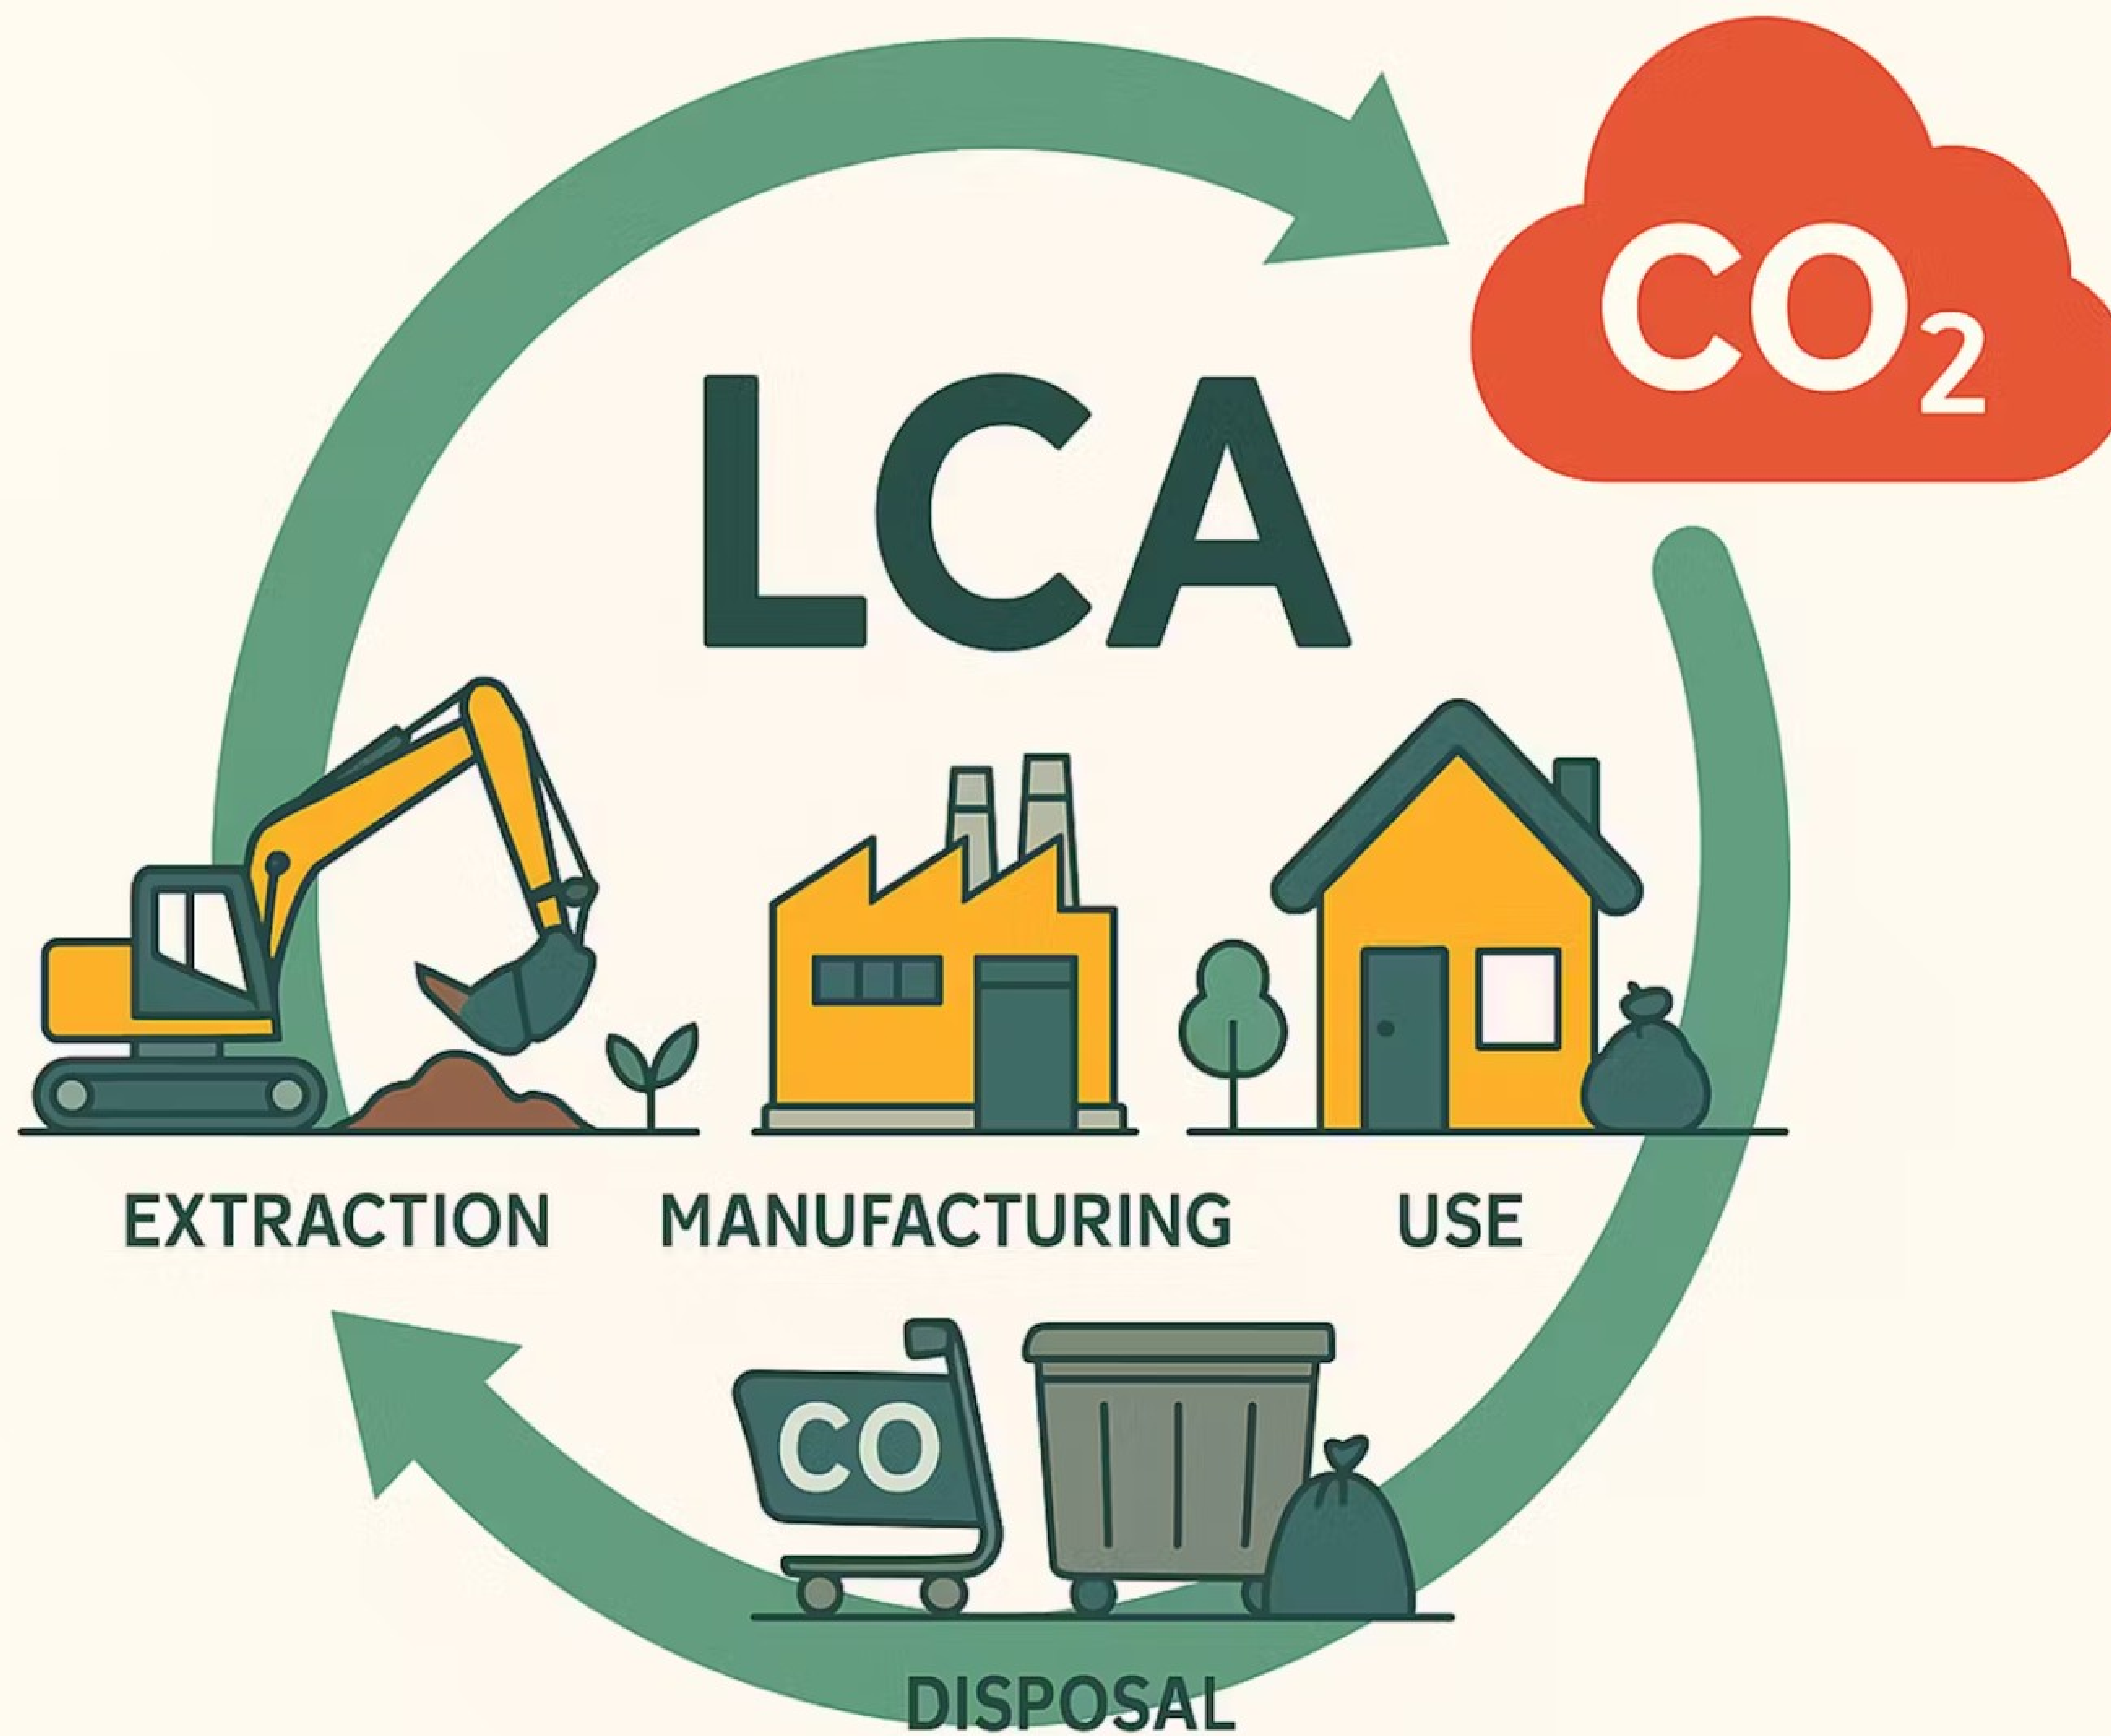

## #5. Standards “reboot” + Commission Fallback

- **Product** - Commission can set minimum performance threshold
- **Process** - Follow the (3-year) work plan (or use ProductIP..)

#4.

## #4. Environmental Performance

- **Process** - Some products Mandatory LCA - Global Warming Performance CO2 (GWP) calculation, as soon as Harmonised Standards are there. Using to be developed EU software.  
*Must update within one year after software is revised.*

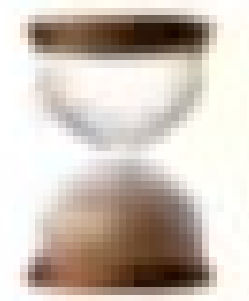

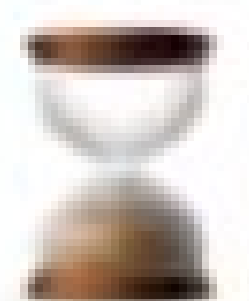

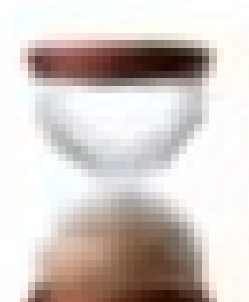

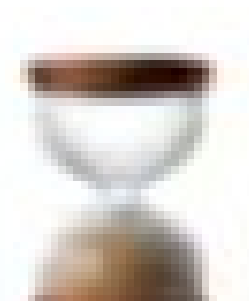

## #4. Environmental Performance (System 3+ ?)

- **Artwork** - CO2 figure in DoCp + DPP (LCA layer)
- **Supply Chain** - Products under **AVCP System 3+** require involvement NB's for site inspections, in case supplier-specific-data is used.

*Involvement of NB's for high priority aspects as the new referee*

## Summary Table: Implementation Milestones

What	Timeline	Current Status
Regulation in force	Jan 7 2025	In effect
General application	Jan 8 2026	Phased compliance in progress
GWP mandatory	2026	For families with updated standards
Expanded indicators	2030	 Phase to be rolled in
Full lifecycle reporting	2032	 Rollout of complete environmental data
DPP infrastructure live	2026–2027	 Coming soon
NB validation (System 3+)	Once standards define it	 Awaiting implementation

## #3. Market Surveillance - Cost recovery

- **Process** - Authorities may charge you for non-compliance testing

"If you're caught, you may end-up paying the lab bill"

# Urban Mining

## #2. Substances of Concern (SoC)

- **Process** - New category of substances to track
- **Artwork** - must appear in DoP & DPP

These substances are beyond the “conventional” SVHC’s

It covers “recycling blockers” too.

# #1. Modernised CE Marking

- **Process** - Comply with standards and shows data.
- **Artwork** - DoC (DoCp) must sync with DPP

From DoC + DoP to DoCp & DPP > Digital Hub

Something that cannot be “repaired/adjusted” later.

# One-More-Thing

# One-More-Thing

- Exceptions for Micro-Enterprises
- Exceptions for heritage and custom-made products

But only under strict conditions!

# Which of the 10 points surprised you most?

# And? Is your company ready for it?

# Name one thing that has to improve internally

experts know it well  
awareness of rules  
it department it software  
quality communication  
data management  
digitalisation awareness  
awareness ownership urgency it  
demanding training workflow

# Are you already using ProductIP
